AI GOVERNANCE · AI ETHICS · AI ENABLEMENT

Nuhamin H. Tesfay

I help organizations adopt AI safely, ethically and effectively.

M.S. Cybersecurity | MBA | Published AI researcher | English · French · Amharic

nuhamintesfay16@gmail.com · linkedin.com/in/nuhamintesfay · Washington, D.C. area

THE PROBLEM I SOLVE

AI has become both a shield and a target

1

A shield

Organizations use AI to work faster and defend themselves, from drafting to detecting fraud.

2

A target

Attackers misuse AI, and AI tools can leak data, make errors, or treat people unfairly.

3

The gap

Most organizations are adopting AI faster than they can govern it or train people to use it well.

AI is only as safe as the people who build it and use it.

WHAT I DO

Three ways I help organizations use AI well

1

Govern

Turn frameworks like NIST AI RMF, ISO/IEC 42001 and the EU AI Act into practical policies and controls.

2

Assess

Find AI risks and ethical impacts before they cause harm: security, privacy, bias and accuracy.

3

Enable

Train teams to use AI confidently and responsibly, and measure the results.

AT A GLANCE

Experience that travels

6

years in risk, programs and training

4

regions: U.S., Ethiopia, East Africa and Asia

6

AI governance standards scored in my framework

2

master’s degrees: Cybersecurity and MBA

3

languages: English, French and Amharic

2026

published, presented and session chair at SEINFORMS

MY PATH IS MY ASSET

Every role built a piece of what I do now

2017–2020

Manchester University

B.S. Business; recruiting, library and student leadership

2019

Ethiopian Airlines

Performance systems and onboarding training

2020–2021

Hentig International

Assistant to the General Manager

2021–2022

Wilmar International

Training programs across four countries

2022–2024

Hentig International

Operations risk: risk register, controls, due diligence

2024–2025

Embassy of France

Development programs and policy reporting

2025–now

Marymount University

M.S. Cybersecurity; AI governance and fluency research

MY RESEARCH

Two questions: is AI governed, and are people ready?

AI GOVERNANCE

A framework scoring six standards

Five layers comparing NIST AI RMF, ISO/IEC 42001, the EU AI Act, NIST CSF 2.0 Cyber AI Profile, OWASP and MITRE ATLAS, with a focus on AI agents.

Paper under review

AI FLUENCY

The Cybersecurity & AI Capital Model

Measures four abilities: Description, Delegation, Discernment and Diligence, plus cybersecurity literacy and workforce readiness.

Published and presented, SEINFORMS 2026

WHAT I'VE BUILT

Research turned into tools people can use

✔

AI Fluency Check

A free online self-assessment that scores the four AI fluency abilities and gives each person a learning plan.

4

AI Readiness Playbook

A 4-week program for small organizations: skills check, weekly training, safe-use rules and a results tracker.

§

Security Compliance Analysis

Linux and Windows vulnerability assessments mapped to NIST, HIPAA, GDPR and PCI DSS.

“At the Embassy of France, I managed programs on cyber-facilitated gender-based violence. I saw how technology can harm vulnerable people.”

That is why I bring a people-first lens to AI: checking for bias, protecting privacy, keeping humans in control of important decisions, and being transparent with the people AI affects.

HOW I'D HELP

My first 90 days

Days 1–30

Listen and map

Meet stakeholders, map where AI is used, and give leadership a clear picture of AI readiness.

Days 31–60

Quick wins

Practical AI use guidelines, an inventory of AI tools and their risks, and a first training session.

Days 61–90

Build to last

A repeatable review process, metrics for adoption and risk, and a 6–12 month roadmap.

WHY ME

A rare combination in one person

Most candidates	What I bring
Write AI policy or teach AI tools	**Do both, so policies actually get followed**
Know AI regulation in theory	**Six years of real risk work: risk registers, controls, reporting to leaders**
Speak to engineers or to leaders	**Translate between technical teams and non-technical leaders, in three languages**
Talk about AI risk	**Published research and working tools that measure AI fluency**
Treat security separately	**A cybersecurity degree that sees how AI is attacked and misused**

LET'S TALK

Let's help your organization adopt AI with confidence.
